

MEI EASITRAX® remote data port

MAXIMUM FLEXIBILITY FOR YOUR VENDING MACHINE

Imagine...Full Sales (Cash and Non-Cash), Product, and Time Accountability in your business.

The MEI EASITRAX® remote data port not only upgrades your machine to DEX, it gives you full control of your business at your fingertips.

Imagine...receiving a call when a machine is down or if there is an empty spiral. The MEI EASITRAX® remote data port connects your machines to your office as well as to the truck. Curbside Polling not only sends an automated pick list to the truck, it networks the machines to reduce the number of cell/land phone lines per location and increases the signal penetration through buildings. Remote monitoring of your machines gives you valuable information to make better decisions.

Imagine...installing an MEI EASITRAX® remote data port now and having the flexibility to add modules in the future.

You don't have to imagine, the future of vending is now...

Sales Accountability

With MEI EASITRAX® remote data port, cash in the machine is tracked electronically and automatically compared to counting room totals. The unit eliminates manual entry and shrinkage.

Product Accountability

The products flowing through your machines are automatically counted and tracked, providing you with data from the vend ticket for each machine. Remote monitoring can determine if any product sell outs and immediately alerts you.

Time Accountability

By tracking the required services by machine, you can optimize your routes by only visiting machines that need servicing. Receiving the remote data at your facility, the MEI EASITRAX® Vending Management Solution can determine your most optimized route schedules.

Credit Card Enabler

- Flexible credit card clearing options
- Use with MEI EASITRAX® vending management software for machine reconciliation
- Use with MDB machines
- Works exclusively with MEI series 2000 combo acceptor, which accepts credit and debit cards, MEI coupons and bills

By installing an MEI EASITRAX® remote data port you have the following options:

Remote Machine Monitoring

- Monitor Machines From Your Office
- Track Machine Downtime Immediately
- Optimize Routes with Dynamic Scheduling
- Pre-Pack Machine Inventory

Machine Alerts

- Track Empty Spirals
- Door Open Sensor
- Cash Box Sensor
- Compressor Sensor
- Electronic Lock Monitoring

Curbside Polling of Machines

- Eliminate the First Walk to the Machine
- Network Machines for Better Communications

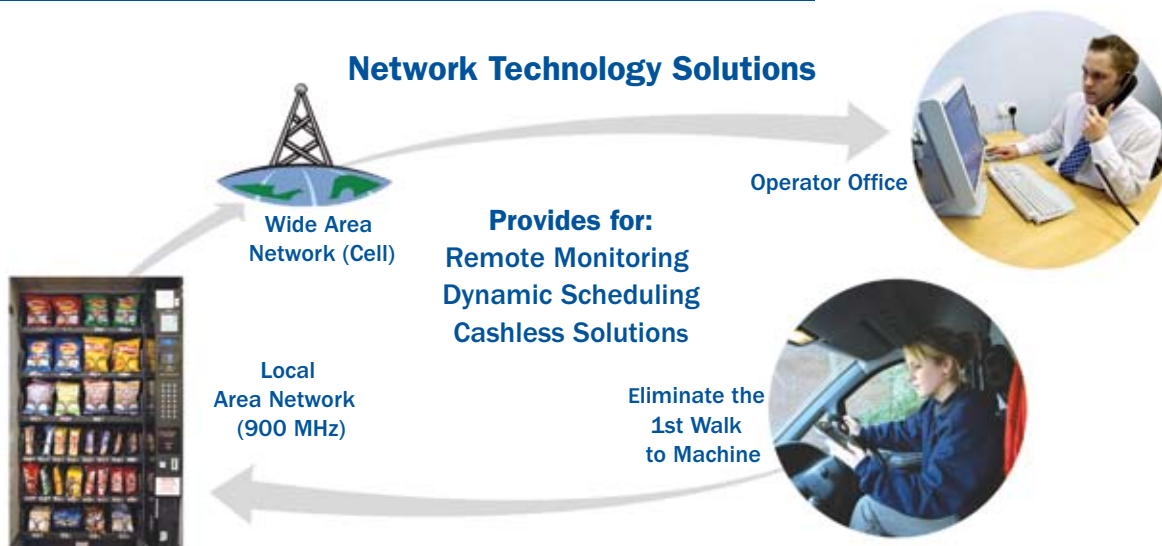

DEX Retrofit for Older Machines

- Cash Accountability
- Product Accountability
- Time Accountability

MEI EASITRAX® remote data port

Easy to Install and Maintain

- T-Harness cables make installation very simple and safe
- Units are UL Listed
- Ensures the safety of your technicians
- Ongoing service and support
- Self-contained kits for supported machines
- Just upload the new software into the flash memory of the MEI EASITRAX® remote data port

Designed for Route Drivers

- Easy to locate inside the machine
- Front port clearly identifies the DEX jack
- Route operators know where to insert the cable
- Audit cables are coded with yellow color bands for easy identification
- Tracks drivers' routes to improve time management

Manufactured for Reliable Operation

- Once installed, the unit is passive, thus eliminating a point of failure
- Heavy-duty, highly reliable DEX jacks stand up to daily wear and tear
- Optical reading option eliminates connector wear

Data Monitoring

- A real-time clock allows you to gather marketing data
 - track product sales by interval
 - track duration of sold-outs and other events

Wireless Local Area Network (LAN) Module

- Drivers can query machines from their trucks to determine what inventory is required to replenish machines—eliminates the first walk to the machine
- FCC approved for the maximum power output to penetrate building walls and floors
- Link machines together in order to reduce costs of Wide Area communications (credit card, dynamic visit scheduling and remote monitoring applications)
- Secure network communications
- Link up to 32 machines together*

Wide Area Network (WAN) Communication Module

- Optional communications module based on cellular, network or telephone technology
- Only one WAN module is required for each LAN group
- Use for credit card clearing, remote monitoring, and dynamic visit scheduling

Minimal Training

- Standardize your vending machines by eliminating complex and manual information gathering processes
- Data retrieval process is consistent and simple, producing an electronic vend ticket
- Drivers can be trained in under one hour

**Providing machines are in proximity and can communicate with each other.*
